IMRAD Structure

The structure of an article according to IMRAD should look as follows.

– *Introduction*.
  – Why the study was done.
  – What was researched.
  – Purpose of the study.
  – What hypotheses were tested.
– *Methods* (aka *Materials and Methods*, *Theoretical Framework*).
  – When, where, and how the research was conducted.
  – What materials were used.
– *Results*.
  – What answer was found.
  – Whether the hypothesis was tested correctly.
– *Discussion*.
  – What the answer implies and why it matters.
  – How it fits in with what other researchers have found.
  – What are the prospects for research.
– Also included in the article structure are *Title*, *Annotation*, *Keywords*

Color, 1: Gold
Color, 2: Magenta
Qty: ~100 g

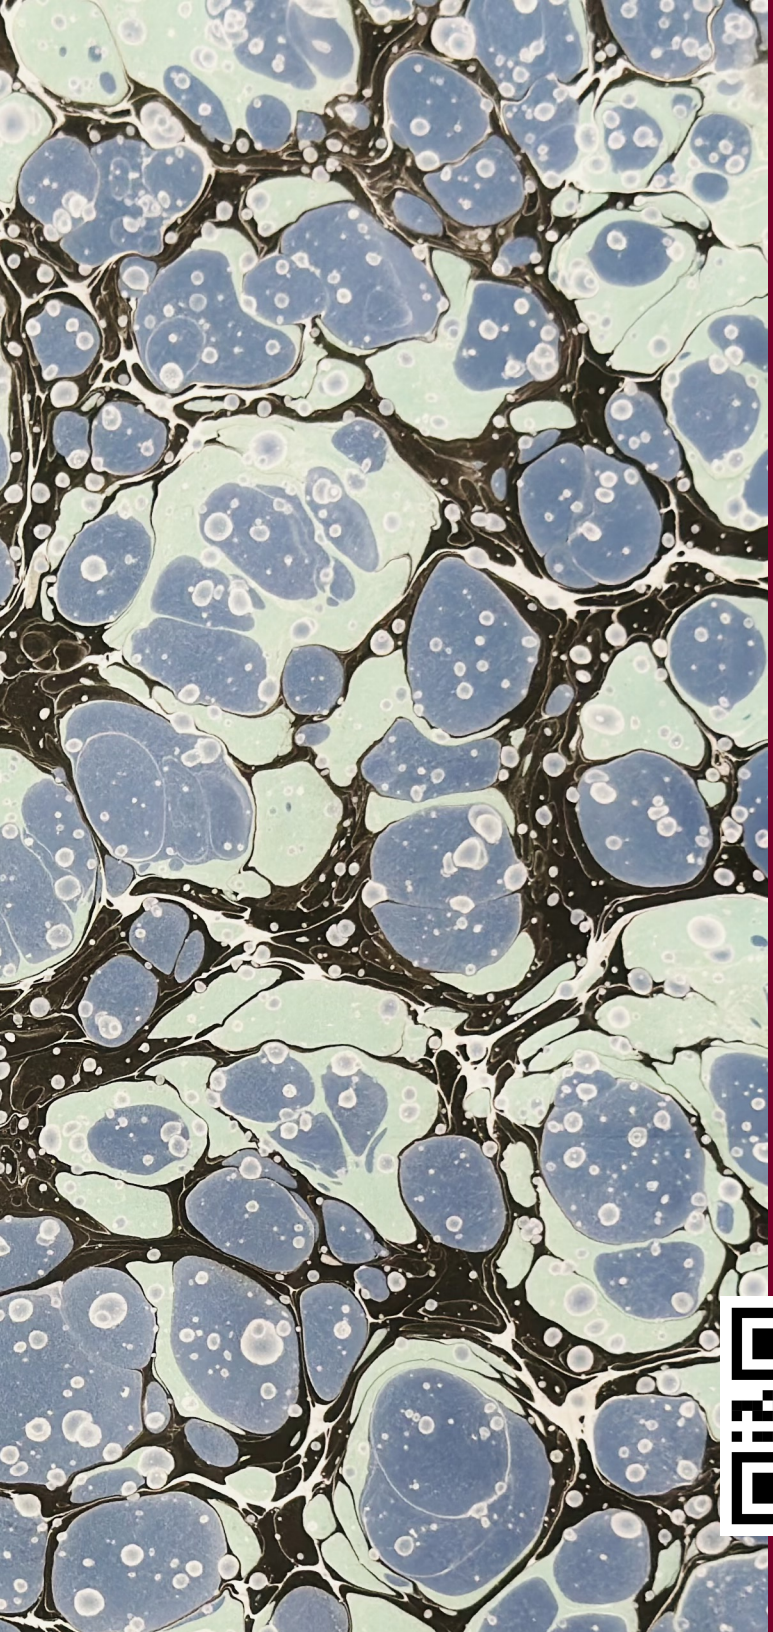
Introduction


Because a handful of friends wanted an articulated dragon as a toy, dragons of different sizes and colors were printed in dual-color filament. The quality of the articulation was of interest due to the potential use of articulating components in novel and currently unimagined products. The physical properties and appearance of dual-color filaments was of interest as it results in a somewhat iridescent surface finish which could prove useful in projects with an aesthetic, rather than purely functional aim.
