IMRAD Structure

The structure of an article according to IMRAD should look as follows.

– *Introduction*.
  – Why the study was done.
  – What was researched.
  – Purpose of the study.
  – What hypotheses were tested.
– *Methods* (aka *Materials and Methods*, *Theoretical Framework*).
  – When, where, and how the research was conducted.
  – What materials were used.
– *Results*.
  – What answer was found.
  – Whether the hypothesis was tested correctly.
– *Discussion*.
  – What the answer implies and why it matters.
  – How it fits in with what other researchers have found.
  – What are the prospects for research.
– Also included in the article structure are *Title*, *Annotation*, *Keywords*

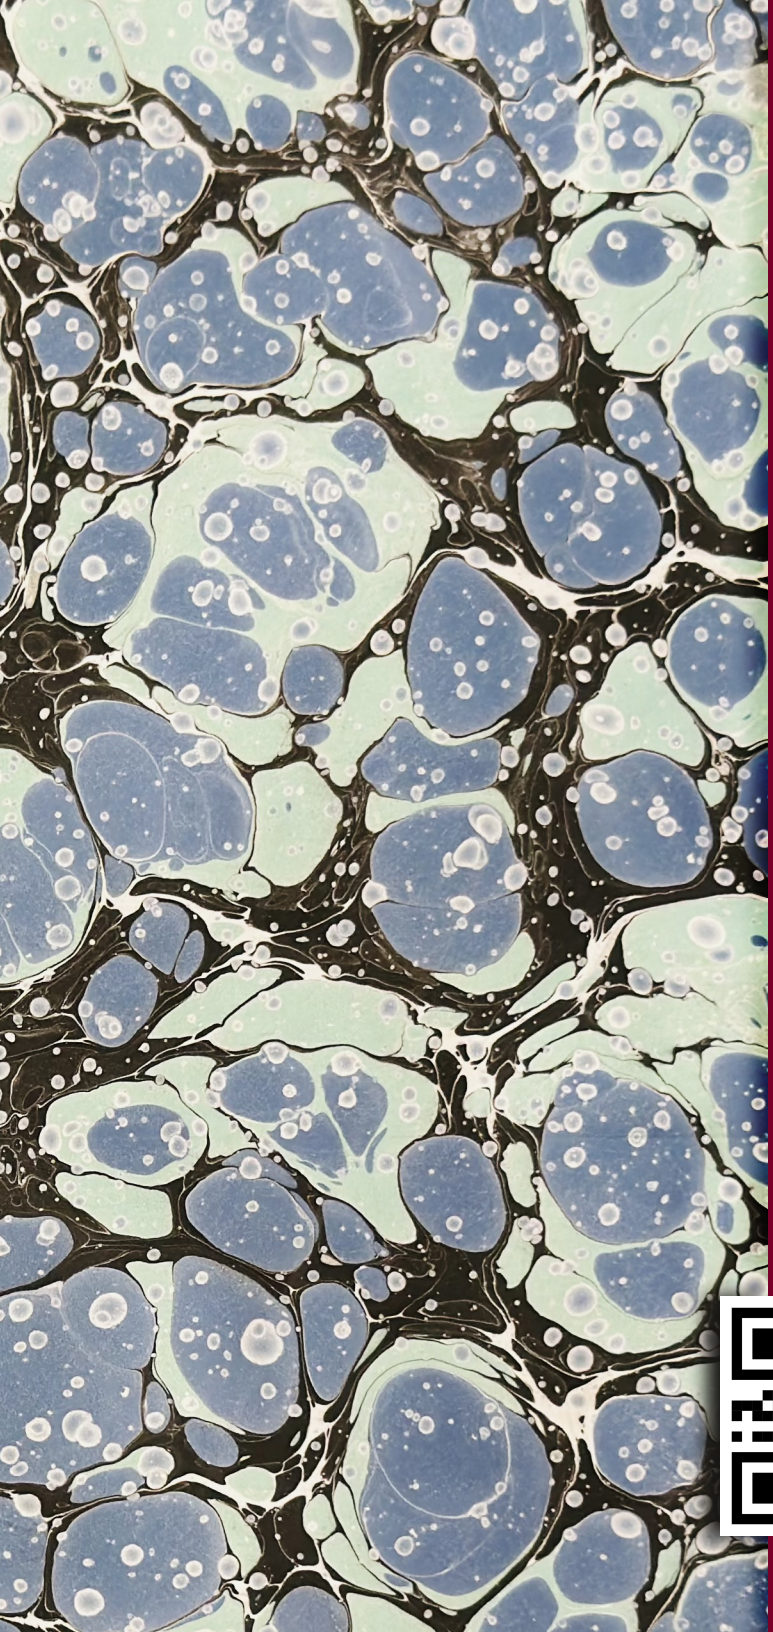
Introduction


Because a handful of friends wanted an articulated dragon as a toy, dragons of different sizes and colors were printed in dual-color filament. The quality of the articulation was of interest due to the potential use of articulating components in novel and curr-ently unimagined products. The physical properties and appear-ance of dual-color filaments was of interest as it results in a some-what iridescent surface finish which could prove useful in projects with an aesthetic, rather than purely functional aim.
